

My Media/Kaltura: How to embed an audio player w/download button

Instructions:

1. In My Media, choose the audio track you want to share and to be downloadable.
2. Click Details and Share. From this menu, select the largest player (this is the only player I have added the download button to) and copy the embed code.

3. Now you can paste this embed code into the HTML editor that is incorporated into any text field in Moodle; forums, labels, announcements etc. See screenshot below:

4. Once you hit save you should see the audio player, 28px tall, with the download button to the right.
